[1] **Housing Is the Financial Cycle: Evidence from 100 Years of Local Building Permits**
(*joint with Gustavo Cortes*)

Best Paper Award at 2025 AREUEA National Conference

Does the housing market lead the financial cycle? We construct a century of monthly building permit quantities and valuations for all U.S. states and the 60 largest metropolitan areas. Volatility in residential building permit growth predicts aggregate and cross-sectional stock and corporate bond returns and volatility, even after controlling for leverage, mortgage access, commodity prices, and firms' exposure to localized physical risks. Predictive power is strongest in areas with more elastic housing supply and extends up to twelve months ahead of downturns. A noisy rational expectations model explains these patterns by treating building permits as an informative signal about dividends.

[2] **Contaminated Capital: Brownfield Cleanups, Entrepreneurship, and Place-Based Redistribution**
(*joint with Aymeric Bellon & Jason (Pang-Li) Chen*)

Russell Sage Foundation Core Research Grant

MIT Policy Impacts Early Career Scholars Grant

Upjohn Institute Early Career Research Award

We study whether environmental cleanup transforms contaminated land into productive capital for local entrepreneurs. Linking EPA Brownfields grant applicants to business credit, firm, and real estate data, we exploit grant score discontinuities and federal funding expansions. Cleanup grants increase local firm entry, employment, survival, and credit access, with effects concentrated within three miles and persisting beyond construction. Remediation also improves nearby property and mortgage outcomes, consistent with a collateral channel. Effects are strongest in places with greater contamination, industrial decline, and credit frictions. Federal grants additionally crowd in complementary funding, redirecting investment toward historically capital-starved communities through flypaper effects, supporting local growth.

[3] **Pricing Government Contract Risk Premia: Evidence from the 2025 Federal Lease Terminations**
(*joint with Soon Hyeok [Steve] Choi*)

CoStar Data Award at 2026 ARES Annual Meeting

Are government contracts a safe investment? We investigate this question using unanticipated Department of Government Efficiency (DOGE) cancellations of federal leases as a shock to commercial mortgage default risk. Offices with DOGE-notified leases experience persistent net operating income declines exceeding 15%, with large, negative effects on CMBS prices and rental cash flows tied to nearby private-tenant properties in Washington, D.C. Spillovers are driven by increased vacancy from tenants with high exposure to procurement contracts involving disrupted federal agencies. Simulations of office property value losses from early lease terminations indicate substantial market-wide repricing of government contract risk.

[4] **Picking Up the PACE: Loans for Residential Climate-Proofing**
(*joint with Aymeric Bellon, Francesco Mazzola, & Guosong Xu*)

2025 E-Axes Forum Research Prize (Honorable Mention)

We study Property Assessed Clean Energy (PACE), an innovative financing contract that lets homeowners fund energy-efficient and resiliency upgrades through their property tax bills. We link PACE originations to property, credit bureau, and permit data to study how they create and redistribute value. Borrowing costs exceed home equity credit costs, especially for households with weaker outside options, consistent with underwriter market power. PACE also increases property tax delinquency. Investments capitalize into higher property values, partly through lower insurance costs, implying household discount rates of 2.9–3.7%. Combining higher property tax revenues with delinquency losses, we estimate positive net local fiscal gains from PACE adoption.
